

Euro-Par 2006

Dresden, Germany

29th August - 1st September 2006

Industrial Exhibition in conjunction with Euro-Par 2006

DataDirect Networks is the recognized leader in high performance storage networks. Its Storage Solutions provide the fastest storage solutions available on the market today with a sustained read and write performance of over 3 Gigabytes/second and a highly modular architecture which offers up to 8 plug and play 4 Gigabit/second Fibre-Channel and 10 Gigabit/second Infiniband (SCSI RDMA protocol) host side connections, optimized for use with a broad range of file systems, CPUs and interconnect technologies. The S2A9550 supports over one thousand SATA and Fibre-Channel disk drives. Features like single or dual parity (RAID6) raid group modes and full disk chassis redundancy ensure no single point of failure. It provides hardware parity calculation not only on reads but also on writes.
